

The Purpose Project

Prototyping Workshop

 thepurposeproject.com.au

THE **PURPOSE**
PROJECT

Workshop Description †

*Our prototyping workshop is aimed at years 10-12. It teaches students about the concept of prototyping and how they can use how they can use it to start taking action on their future lives **today**.*

In this engaging, evidence-based workshop we start by helping students better understand how they can use their values and strengths to design a career path aligns with their purpose.

We then explain the popular Design Thinking concept of prototyping. Students will learn, through real-life examples, how they can take action today to learn more about their desired path, saving time and money by better understanding their future career path before making a life decision. We explore the concept of 'Informational Interview', and demonstrate how they can take small steps to better experience whether their future life would align with their values.

Through our programs the students will hear from industry speakers from our partner companies, to better understand how they have used the concept of prototyping to make more informed career decisions and open up new opportunities.

Modules

Module	Description	Outcome
Module 1: The Story of You	<p>Students will explore their values, talents, interests and ways they can impact others through interactive and reflective exercises and videos. Importantly, we will focus on identity formation: “Who do you want to be?” rather than “What do you want to do?”</p>	<p>Students will develop a greater sense of self by completing interactive exercises exploring their current interests, strengths and values. Students will identify clear prototype paths connecting the dots between their values, strengths, interests and external market needs</p>
Module 2: Connecting the Dots	<p>Students will learn to link their talents, interests, values with external market demands i.e. What the world needs. They will then connect their identity quadrants and form their “Multiple Lives Plan”.</p>	<p>Students will learn about Design Thinking; how to find and take action on the quickest path to their chosen field of interest</p>
Module 3: Prototyping Paths	<p>Students will learn about design thinking and prototyping; They will brainstorm in groups and find the quickest path to their “Multiple Lives Plan”. Students will also learn about “Informational Interviews” and learn how to start taking action towards their plans..</p>	<p>Students will explore the link between career success, mental well-being and happiness</p>

Key Details

Workshop

Prototyping

Duration

2 hours (+ short water/recess break)

Years

Years 10 - 12

Group size

Minimum 30 to max. 150 students

Cost

- \$0 for Government schools with [ICSEA](#) < 1000
- \$20 per student for other schools (bulk % discount applies for larger groups)

Delivery

Room requires a projector, speakers and tables for students to write on. School to print a 10 page workbook for each student.

How Do Students Find The Workshop?

98%

of students would recommend our workshop to other young people

88%

of students felt more confident about choosing a career path

91%

committed to taking action on their careers after our program

"I love the interactions and the program in general. I felt that I learnt a lot about choosing my purpose in life."

Year 9 student, Cumberland High

"I liked the discussions that were given and how the activities gave a more clearer vision on what my passion is."

Year 10 student, Canterbury High

"It was an amazing experience and was pretty fun thank you :). when are you guys coming back?"

Year 10 student, Pendle Hill High

Thank You
